

# FACT SHEET

## QUICK BREAK CLEANING PRODUCTS

**75% of all discharge quality complaints are related to Degreasers and Detergents as many users don't realise the performance of all water treatment equipment relies heavily on the quality of the degreaser, truck wash, vehicle wash, even hand cleanser selected.**

### What are Quick Breaks?

Clearmake cleaning products rapidly 'break' the treated water by temporarily emulsifying and separating dirt and oil during the degreasing or wash-down process. After the 'Quick Break' is washed from the cleaned surface the 'breaking' action releases more than 90% of the oil within the first 30 minutes, allowing the oil to rise to the surface of the collection pit or separator from where it can be removed.

### Why use Quick Break products?

Cleaning and degreasing of engines and heavy equipment are an integral part of industry. The use of degreasers and detergents that are biodegradable and possess 'Quick Break' properties are vital to the operational efficiency of your oil/water separator and water treatment system, and substantially reduce environmental contamination.

### Not all Quick Break products are created equal.

With no standards in place the terms 'Quick Break' and 'Environmentally Friendly' are often used to promote products that are inappropriate for use with water treatment systems.

Some so called 'Quick Breaks' are effective cleaners but create an emulsion of oil, water and detergents that do not 'break' and therefore can not be separated by the water treatment equipment, discharging an emulsified stream that does not comply with trade waste discharge standards. Some offer effective 'Quick Break' action, but achieve their results with chemicals that can be hazardous to the environment and will not meet trade waste discharge standards.

### Clearmake have developed a complete range of Quick Break cleaning products to ensure:

- Outstanding cleaning ability
- Fully effective quick break action
- Optimal performance of water treatment equipment
- Environmentally friendly performance (biodegradable)
- Superior efficiency & cost/benefit ratio to conventional cleaners

As a leading Australian manufacturer of water treatment equipment, Clearmake understands superior Quick Break cleaning formulations.

### So who better to trust for your cleaning needs?
